

Because many pieces of farm equipment reach heights of 14 feet or higher, always remember to look up when entering fields and barn lots to make sure there is enough room to pass beneath electric lines. Electric contact accidents can result in loss of limbs or even death.

Farm Safety Rules:

- The number one electrical farm hazard is the potential contact from a grain auger to a power line. Always look up before raising or moving an auger.
- The same is true of metal irrigation pipe, often stored along fence lines under an electric line. Never raise or move irrigation pipe without looking up. A few seconds of caution can mean the difference between life and death.
- Be sure hand tools are in good working order and use them according to manufacturers' instructions.
- Ensure that the wiring in your workshop is adequate to handle your tools. And never operate any electric tools near water.
- Read labels and handling instructions carefully and follow them when using chemicals and herbicides. Never leave chemicals where children or animals can get into them; store them in a locked cabinet if possible. Safely dispose of containers.
